That was really what I wanted to talk to you about." Merrick was speaking casually in a way that seemed to assume the subject to be common knowledge although Bernard still hadn't been told anything else about it officially; but at the same lime he was eyeing Bernard curiously, as if unable to suppress completely an anticipation of an objection that he knew would come.."Howard Kalens, no doubt about it," Bernard Fallows was saying. "If we've only got two years to knock the place .. into shape, he's lust the kind of man we need. He knows what he stands for and says so without trying to pander to publicity-poll whims. Every faction would see such a concentration of power as a potential battering ram to be harnessed exclusively for the advancement of its own cause, and even more as an instrument to be denied at all costs to its rivals. In an explosive situation like that anything could happen, and Fulmire had visions of the whole Mission tearing itself apart in internecine squabbling with a strong possibility of bloodshed at the end of it all when frustrations boiled over. The only force that he could see with any potential for exerting a stabilizing influence was the more moderate consensus as represented by the Mayflower l/s population as a whole; and Lechat, possibly, could provide a means of mobilizing it before things got out of hand.."Eight minutes," Stormbel replied. He still didn't know why Celia should have been so anxious to get away from Sterm or why she should have been in any danger. Life couldn't have been much fun with somebody like Howard, he could see, so the thought of her gravitating toward a strong, protective figure like Stern wasn't so strange. And it didn't seem so unnatural that she should have stayed near Sterm after Howard was killed. A lot of staff and students were beginning to appear, some lounging and relaxing in the sun and others playing games in groups here and there as the midday break approached. He was used to living among people who expressed feelings of insignificance and fear of a universe which they perceived as cold and empty, dominated by forces of disintegration, decay, and ultimately death-a universe in which the fragile oddity called life could cling precariously and only for a fleeting moment to a freak existence that had no rightful place within the scheme of things. "Well, hello, Jeeves. How about all that? I guess you'd better stay who you are for the time being. How about giving us a rundown on this place for a start? For instance, how do you..." Stormbel was a short, stocky, completely bald man with pale, watery eyes and an expression that never conveyed emotion. A thin moustache pencil-lined his upper lip. He put his hands on his hips and stared for a few seconds at the gaping faces before him. "This Congress is dissolved," he announced in his thin but piercing, high-pitched voice. "The Mission is now under the direct command of the Military." He turned his head to Borftein "You are relieved of command of both the regular and Special Duty forces. Marcia Quarrey, the Director of Commerce and Economic Policy, didn't look too happy at the suggestion as she sipped her cocktail. "Obviously that would be possible," she said, setting down her glass. "But would it serve any useful purpose? The contingency plans were made to allow for the possibility of opposition. Well, there hasn't been any opposition. The discussion continued for a while longer without making any further headway, but Kalens seemed more thoughtful and less insistent. Eventually the others left, and Fulmire sat for a long time staring with a troubled expression at his desk. At last he activated the terminal by his chair, which he had switched off earlier in response to Kalens's request for "one or two informal opinions that I would

A call came through from Brigade, and Sirocco switched into the audio channel to take it. Colman sat back and looked around. The indicators and alarms on the console in front of him had nothing to report. Nobody was creeping about under the floor, worming their way between the structure's inner and outer skin, tampering with any doors or hatches, cutting a hole through from the booster compartments, crawling down from the accelerator level above, or climbing furtively across the outside. Nobody, it seemed, wanted any thermonuclear warheads today. He rose and moved round behind the chair. "Need to stretch my legs," he said as Sirocco glanced up behind his faceplate. "It's time to do a round anyhow." Sirocco nodded and carried on talking inside his helmet. Colman shouldered his M32 and left the guardroom. "Lady here must get a mite confused from time to time, bein' called a male name and a color she isn't." "I had savored each of three additional tidbits that his young master was conned into sharing, instead of. Furthermore, he is reluctant to put these people? whoever they may be? at risk. If the killers track him. He's sincere in his intention to pay for what he takes, but nevertheless he feels like a criminal. Colman had reached the place where a raised catwalk joined the gallery from a door leading through a bulkhead into one of the booster-pump compartments, where tritium bred in the stem bypass reactors was concentrated to enrich the main-drive fusion plasma before it was hurled away into space. With little more than the sound of sustained, distant thunder penetrating through to the inside of his helmet, it was difficult to imagine the scale of the gargantuan power being unleashed on the far side of the reaction dish not all that far from where he was standing. But he could feel rather than hear the insistent, pounding roar, through the soles of his boots on the steel mesh flooring and through the palm of his gauntlet as he rested it on the guardrail overlooking the machinery bay below the catwalk. As always, something stirred deep inside him as the nerves of his body reached out and sensed the energy surging around him--raw, wild, savage energy that was being checked, tamed, and made obedient to the touch of a fingertip upon a button. He gazed along the lines of superconducting bus bars with core maintained within mere tens of degrees from absolute zero just feet from hundred million-degree plasmas, at the accelerator casing above his head, where pieces of atoms flashed at almost the speed of light along paths controlled to within millionths of an inch, at the bundles of data cables marching away to carry details of everything that happened from microsecond to microsecond to the ever-alert control computers, and had to remind himself that it had all been constructed by men. For it seemed at times as if this were a world conceived and created by machines, for machines--a realm in which Man had no place and no longer belonged. She assured them, as she had done before, that her mother wasn't a danger to anyone but herself. Sure, Sirocco looked worried. "Look, there is a force on its way forward to occupy the nose. We want to avoid any senseless bloodshed. Those locks must be kept open. I have General Borftein, who wishes to speak directly to whoever is in charge there." "roses. Colman closed his eyes for a moment and breathed a long, drawn-out sigh of relief. "They made it," he whispered. "They're all in there." Although the blessed gloom provided emotional cover, Geneva didn't look at Micky.
